ADM GMO statement on low-erucic rapeseed products

ADM produces low-erucic rapeseed products which are not subject to the labelling requirements specified in the regulations (EC) No 1829/2003 and 1830/2003.

As a Fediol member company ADM follows the Fediol statement on conventional low-erucic rapeseed and products derived thereof. The conventional status of the purchased seed, not required to be labelled referring to the regulations (EC) No 1829/2003 and 1830/2003, is contracted between our rapeseed suppliers and us. Furthermore, we participate in the monitoring system of our European industry federation Fediol to verify the conventional status of the seed. Measurements are taken at our facilities to preserve the conventional integrity of the seed and the products derived thereof.

Yours sincerely,

Bernd Wottka
